1 Context

The Training and Development Department of the Oil & Gaz company in Libya intends to training the targeted group of employees in the Digital Transformation and AI skills and capabilities to adopt the best practices.

Alight MEA, a Microsoft Solutions Partner with the necessary expertise and skills will provide a training program and workshops lead by industry experts.

2 One Week Intensive Program :Digital Transformation and AI

This five-day bootcamp gives a complete overview of digital transformation and applied AI across exploration, production, maintenance, and HSE. It is designed for mixed cohorts that include engineering, operations, IT, and business leadership. Daily hands-on activities use realistic datasets and ready-to-use templates that participants can take back to work.

2.1 Training Program Overview

The table below provides the day by day flow with outcomes, core activities, and tangible deliverables.

Day	Theme	Key outcomes	Activities and labs	Deliverables
Day 1	Digital transformation in oil and gas	Shared vocabulary on digital transformation. Map of current maturity and priorities.	Maturity assessment. Value stream mapping. Case studies from upstream and downstream.	Digital transformation canvas. Priority backlog template. Case study summaries.
Day 2	AI for exploration and production	Practical view of machine learning use cases across subsurface and operations.	Well log clustering mini lab. Image classification on core samples with prebuilt notebook. Failure mode mapping.	ML use case catalogue. Model evaluation checklist. Lab notebooks with code and data.
Day 3	Data analytics and IoT in operations	Understand sensor data flows and build simple dashboards.	Time series analysis on pump data. Alarm rationalization exercise. Building a KPI dashboard with provided dataset.	Sample IoT architecture diagram. Dashboard workbook. KPI library.
Day 4	Cybersecurity and risk management	Recognize typical threats to SCADA and OT networks. Build a response plan.	Tabletop incident simulation. Attack surface mapping. Policy quick wins.	OT cyber playbook. Incident response template. Access control checklist.
Day 5	Strategy, leadership, and change	Build a realistic 90-day plan and a one-year roadmap.	Stakeholder mapping. Business case pitch. Final knowledge check and feedback.	Roadmap deck. Benefits tracking sheet. Certificate of completion.

2.2 Audience and learning objectives

We summarize below who should attend and what they will be able to do by the end of the week.

Managers, engineers, data specialists, and IT leaders who need a common language and a hands-on start will benefit.

Participants will be able to prioritize digital opportunities, evaluate AI feasibility, interpret sensor data for reliability improvements, frame cyber risks, and present a credible roadmap.

2.3 Methodology

The following table explains the delivery approach and instructional design.

Dimension	Details
Delivery style	Instructor led sessions with live demos and guided labs. Ratio of concept to practice is roughly forty to sixty.
Materials	Printed workbooks. Slide deck in PDF. Datasets for labs. Templates in Word and Excel.
Assessment	Daily knowledge checks. End of course practical assignment and short quiz.
Certification	Certificate of completion issued by the training provider. Includes learning hours and covered competencies.

2.4 Logistics and inclusions

This table outlines practical aspects of delivery in Tunis and what is included.

Item	Details
Location	On site in Tunis at the training facility.
Duration	Five consecutive days. Daily schedule from 09:00 to 14:30 with breaks.
Group size	Up to 10 participants. One trainer and one teaching assistant when the group is eight or more.
Language	Delivery available in Arabic and English. Training assets can be bilingual on request.
Equipment	Participants bring laptops. We provide preinstalled lab packages that run offline.
Included	Trainer delivery. Workbooks. Lab datasets. Certificate issuance. Attendance report.

2.5 Prerequisites

The table below lists entry requirements to ensure a smooth experience.

Area	Minimum expectation
Technical	Basic proficiency with spreadsheets. No coding required. Optional Python notebooks provided for advanced attendees.
Business context	Exposure to upstream or downstream operations.
IT and OT	Awareness of plant systems is helpful but not mandatory.

3 Two Weeks Comprehensive Program: Digital Transformation and AI

This 10 days program deepens every theme from the intensive track and adds advanced labs, simulations, and a capstone project. Participants finish with a defensible business case and a one-year roadmap reviewed by the trainer.

The second week emphasizes predictive maintenance, advanced modeling, OT security exercises, and change leadership.

3.1 Training Program Overview

The table below shows the detailed schedule across two weeks with focus areas and tangible outputs.

Day	Theme	Focus areas	Activities and labs	Deliverables
Day 1	Digital transformation foundations	Industry trends. Value levers. Maturity baseline.	Heat map of opportunities. Case study analysis.	Opportunity heat map. Transformation charter.
Day 2	Process and value stream design	Waste identification. Flow and handoffs.	Current state mapping. Target state design.	Target process map. Implementation checklist.
Day 3	AI for subsurface and production	Feature engineering. Model selection.	Build and compare models on well performance data.	Model comparison report. Reproducible notebook.
Day 4	AI for reliability and HSE	Failure prediction. Anomaly detection.	Time series forecasting lab. HSE leading indicator design.	Predictive maintenance canvas. HSE KPI sheet.
Day 5	Data and IoT architecture	Edge to cloud patterns. Data governance.	Architect a sensor to dashboard pipeline. Data quality rules.	Reference architecture. Data governance playbook.
Day 6	Advanced dashboards and analytics	Visual storytelling. Operational KPIs.	Build a management and field dashboard set.	Dashboard templates. KPI dictionary.
Day 7	OT cybersecurity deep dive	Threat modeling. Network segmentation.	SCADA tabletop exercise. Incident response drill.	OT risk register. Response runbook.
Day 8	Change management and leadership	Stakeholder strategies. Adoption metrics.	Communication plan. Training plan for end users.	Change plan pack. Adoption metric catalog.
Day 9	Business case and roadmap	Benefits modeling. Cost and risk analysis.	Build a one year roadmap and 90 day plan.	Roadmap deck. Cost benefit model in Excel.

Day 10	Capstone presentations	Executive pitches. Peer review.	Present capstone. Trainer feedback and coaching.	Final capstone evaluation. Certificate of achievement.
--------	------------------------	---------------------------------	--	--

3.2 Audience and learning objectives

We clarify below who should join the extended track and the competencies they will gain.

This program is ideal for future champions and project leads who will design, justify, and drive digital initiatives. Graduates will be able to scope and validate AI use cases, architect data flows from sensor to decision, implement governance and security measures for OT, plan organizational change, and secure sponsorship through a quantified business case.

3.3 Methodology and assessment

The following table details the teaching model, coaching, and evaluation used throughout the two weeks.

Dimension	Details
Delivery style	Blend of theory, guided labs, simulations, and coached project work. Concept to practice ratio is roughly thirty to seventy.
Coaching	Daily office hours. Iterative reviews of capstone deliverables.
Assessment	Three checkpoints. Daily knowledge checks. Final capstone scored against a transparent rubric.
Certification	Certificate of achievement for participants who pass the capstone. Certificate of completion for others.
Materials	Extended workbook. Advanced datasets. Architecture stencils. Policy templates.

3.4 Logistics and inclusions

This table summarizes the practical details for the two week format.

Item	Details
Location	On site in Tunis at the training facility.
Duration	10 days. Monday to Friday over two consecutive weeks. Daily schedule from 09:00 to 14:30.
Group size	Up to 10 participants. One trainer and one teaching assistant.
Language	Arabic and English. Mixed language delivery possible.
Included	Delivery.

	All training assets. Capstone coaching. Certificates. Detailed attendance report with assessment outcomes.
--	---

3.5 Prerequisites

The table below sets expectations for backgrounds and tools.

Area	Minimum expectation
Technical	Comfortable with spreadsheets and basic analytics. Optional Python labs for advanced participants.
Business context	Experience in upstream, midstream, or downstream operations.
IT and OT	Familiarity with plant systems and networks is recommended for the security module.

3.6 Capstone project

Participants form small teams and select a live problem from the client environment such as reducing unplanned downtime for a critical asset or improving turnaround planning. They build a scaled business case with data driven benefits, risks, costs, and a one year roadmap with a 90 day starter plan. The trainer provides feedback at multiple checkpoints to raise the quality of the final pitch.

4 Financial Proposal

4.1 One Week Intensive Program costs

Designation	Participants	Days	Price day/ USD	Total USD / VAT EX
Digital Transformation and AI	10	5	1 650.00\$	8 250.00\$

4.2 Two Weeks Comprehensive Program

Designation	Participants	Days	Price day/ USD	Total USD / VAT EX
Digital Transformation and AI	10	10	1 650.00\$	16 500.00\$

4.3 Conditions of realization

- Location: Tunis, Tunisia
- Duration of training: 5h/day of training.
- Number of participants: maximum 10
- A document holder, a notebook, a pen, a 16 GB flash disk, a digital course support.
- Snacks & coffee breaks, and lunch per participant per day.
- Daily transportation to training facility
- A certificate of training
- End of training gift
- End of course outing dinner

4.4 Payment Conditions

The payment conditions related to the training program and workshops are as follows :

- 60% on Purchase order
- 40% on final training delivery
